

gpoa plus EBIT-EV

Directed factor-mimicking portfolio catalogue

Abstract

This in-sample catalogue constructs one FMP for each configured field or composite and compares all factors on one factor- and control-complete monthly window. Factors are indexed by directed raw Sharpe, highest first. Direction is the sign that makes comparison-window Sharpe non-negative.

Methodology

Signals are observed at month-end, earn the next calendar month's simple return, and refresh monthly. Every factor must independently pass breadth, history, coverage, and non-degeneracy gates; none is silently dropped. One factor- and control-complete window fixes direction and Sharpe order and feeds all reported analyses. Risk Loadings include HAC t-statistics; Return Contributions are loading times annualized control mean, plus alpha and realized total. Rank diagnostics use 0/1/3/6/12/36-month horizons; available-history statistics are diagnostic only.

Construction Configuration

Setting	Effective value
Factors	2
Universe	shared security screen; refreshed monthly
Formation filters	price ≥ 1.0 ; 21d dollar volume $\geq$ none
Market-cap screen	top 37.5% monthly
Signal preparation	within-month winsorize, normalize, then demean
Composite	mean available normalized components; factor-specific coverage floor
Construction	one blanket profile
Rebalance / return	month-end / next calendar month simple return
Costs	effective configured costs; default 0 bps
Minimum sample	20 stocks/month; 24 common months; 90% factor coverage
Comparison window	2007-03-01 to 2026-05-01; factor- and control-complete
Winsor settings	1%-99%
Controls	MKT, SMB, VAL, MOM, BAB, QMJ

Returns PCA

Figure: catalogue factors are numbered by directed-Sharpe index; attribution controls are named; $N=231$ common months.

Index

factor_model_runner/run.py--configsrc/experiments/factor_model_runner/gpoa_ebit_ev.py--n0--seed0.

Direction is selected once from raw comparison-window Sharpe and then applied before every downstream regression, style calculation, plot, table, PCA coordinate, and index assignment. The run directory contains the source configuration, normalized configuration, manifest, canonical tables, monthly returns, PCA coordinates, plots, report source, and PDF.
